1 INTRODUCTION

California Public Resources Code (PRC), Sections 41730 *et seq.* require every California city and county to prepare and adopt a Non-Disposal Facility Element (NDFE) for all new non-disposal facilities, and any expansions of existing non-disposal facilities, that will be needed to implement local Source Reduction and Recycling Elements (SRREs). A non-disposal facility is defined as any solid waste facility required to obtain a state solid waste facility permit, except a disposal facility or a transformation facility (PRC Section 40151).

This update describes the current non-disposal facility system of the unincorporated San Diego County consisting of materials recovery facilities (MRF's), transfer stations, rural transfer stations, organic processors and construction, demolition and inert processing (CDI) recycling facilities. The facilities listed include those with CalRecycle SWIS numbers, proposed facilities, and facilities that do not require a CalRecycle permit. These non-disposal facilities will serve as the County's core facilities to achieve its waste diversion goals of PRC Section 41780 and implement its SRRE.

In April 2017, the Board of Supervisors adopted a Strategic Plan to Reduce Waste. Created in collaboration with local communities, this Plan focuses on programs and policies targeting reducing waste, hauler programs and services and increasing community recycling and waste reduction awareness and participation. The first phases of the plan focus on increasing construction and demolition recycling through ordinance amendments, updating franchise hauler agreements to expand diversion efforts, strengthening commercial diversion programs, improving County facility diversion, and expanding education and outreach.

Due to a change in the process to amend the NDFE pursuant to AB 341 (Chapter 4.5, Statutes of 2011, Chesbro, AB 341) there are no longer specific regulatory requirements for public noticing or approval that a jurisdiction must follow, such as adopting the facility update by resolution at a public hearing or publicly noticing the change.

The County of San Diego has updated and hereby transmits to CalRecycle the County's seventh NDFE amendment.

1.1 Changes to the NDFE

Since the previous NDFE Amendment in September 2013, there have been many newly permitted facilities, permits modified, and some facility closures. Described below are additional details on the facility updates.

Current Amendment (June 2020)

Proposed facility, June 2020: Otay Landfill Organics Station located at 1700 Maxwell Road, Chula Vista, CA 91911. This is a proposed organics processing system to recover compostable materials for increased landfill diversion. The materials accepted include greenwaste, foodwaste, and green and food waste mixtures. Permit number is to be determined.

Previous amendments (February 2020)**Permit modification:**

Amswede Organics Recycling was previously designated as a medium volume transfer and processing facility. The operator changed their designated status to a 1) Registration Tier Medium Volume CDI Processing Permit and 2) an EA Notification for a Limited Volume Transfer Operation (LVTO) for solid waste. Amswede will be able to receive green materials as part of the LVTO designation. These changes are being made to accommodate more diversion of CDI debris and green materials. This facility modified their permit to reflect those changes under the name Amswede Recycling Inc. and was assigned two SWIS numbers. The operation will be limited to less than 175 tons per day at the CDI Facility and less than 15 tons per day at the Limited Volume Transfer Operation (LVTO). The LVTO will be a smaller area within the current footprint of the facility. The facility anticipates a minimum of 60% diversion as identified in the CDI Processing Facility Plan submitted to the County of San Diego's Local Enforcement Agency on October 3rd, 2018.

New facility permits or EA Notifications

Agromin OC – Oceanside Green Materials Composting Operation (37-AA-0991) located at 1200 Wilshire Road, Fallbrook, CA 92028

JMD Composting Operations (37-AA-0993) located at 17470 Paradise Mountain Road in Valley Center, CA 92082

Otay Mesa Compost Facility (37-AA-0988) located at 468-A Alta Road, San Diego, CA 92154. (Proposed food composting facility)

Ramona Organics (37-AA-0994) located at 324 Maple Street, Ramona, CA 92065. Chip and grind facility

RAMCO Inert Processing Facility located at 8354 Nelson Way, Escondido, CA 92025.

Evergreen Nursery Blossom Valley at 9708 Flinn Springs Rd, El Cajon, CA 92021. EA Notification permit 37-AA-0992. Composting Operation.

Proposed/pending facilities

Otay Landfill Inc. Composting Operation at 1700 Maxwell Road, Chula Vista, CA 91911. Proposed composting facility. Facility proposed to include green waste, pre-and post-consumer food waste, wood waste, and agricultural waste (up to 5% by weight manure). Aerated Static Piles composting system. 200 tons per day.

Removed from NDFE

Lakeside Land Company CDI facility is no longer in operation.

El Corazon Chip and Grind facility 37-AA-0959 is no longer in operation.

Universal Refuse Removal Recycling and Transfer Station (CDI LINE ONLY) – is no longer in operation.

SANCO Recycling in Escondido. This facility previously had its own SWIS number of 37-AA-0965. This SWIS number was discontinued and SANCO Recycling was merged with Escondido Resource Recovery #37-AA-0906.

The Closed Landfills and Rural Transfer Stations table was also removed. Any activity on these sites would be on a case by case basis and new facilities will be added as needed.

2 OVERVIEW OF SOLID WASTE MANAGEMENT IN THE UNINCORPORATED AREAS OF THE COUNTY OF SAN DIEGO

The unincorporated areas of San Diego County are serviced by a complex network of solid waste and non-disposal facilities, franchised haulers, and private residential and commercial self-haulers. County Ordinance 68.571 requires mandatory recycling for businesses and residents, and an extensive program is in place for compliance. AB 341 and AB 1826 place additional recycling requirements for commercial businesses, multifamily complexes and public entities.

Franchised haulers transport a range of materials and provide regular residential, commercial and industrial services in unincorporated areas of the county. The remaining materials are picked up by various self-haulers and contractors who directly divert materials, deliver recyclables to recycling facilities, and dispose solid waste and residuals in landfills or transfer stations.

Solid waste that is not directly disposed in a landfill is deposited temporarily in several transfer and processing stations. Materials are also sent to non-disposal sites, including recycling centers, organics and inert processing facilities, salvage, reuse and repair facilities.

Recyclable materials are collected either source separated or commingled. Source separated material facilities generally provide the most economical method to recycle and are located at various sites throughout the county. A large portion of the region's commingled recyclables are processed at the material recovery facilities located at Escondido Resource Recovery in Escondido, EDCO Lemon Grove Material Recovery Facility (MRF), Ramona MRF and Transfer Station, and Allan Company. The recycling rate of facilities in the unincorporated county is determined from the countywide data provided to the County by transfer stations in their quarterly reports.

The network of non-disposal facilities is integral to the delivery and processing of collected materials. Some of the facilities act as waste collection centers for transfer to landfills or recycling facilities, and others also have recycling centers either onsite or nearby. The facilities vary as to quality and quantity of materials recycled but manage a significant portion of the unincorporated County's solid waste stream.

A brief synopsis of all five facility types is given below. Following this synopsis are the tables which include the facility details. Lastly, this document includes other facilities and facilities deleted from the NDFE.

3 FACILITIES DIVERTING MORE OR CAPABLE OF DIVERTING MORE THAN FIVE PERCENT OF UNINCORPORATED COUNTY THROUGHPUT

3.1 Transfer Stations and Materials Recovery Facilities (MRF's)

This section includes information on existing transfer stations and materials recovery facilities (MRF's). Various transfer stations in this section sort recyclables by hand and machine from the transfer station floor and/or operate material recovery sorting lines, commonly referred to as MRF's. MRF's receive commingled and source separated traditional recyclables such as paper, glass, plastics and metals. The materials are processed and recovered for sale in the secondary materials markets. These facilities are listed in **Table 1** and

Table 2 in alphabetical order.

3.2 Materials Recovery Facilities Located on Landfills

In recent years, there has been an increasing amount of diversion activities occurring at landfills. Construction, demolition and inert processing (CDI), chip and grind, and composting operations are now permitted on Otay Landfill and a green material chip and grind operation is permitted on Sycamore Landfill. CDI facilities may be considered by Republic Services at their other landfills, although no action has been determined or confirmed at this time. These facilities are listed in **Table 3** in alphabetical order.

3.3 County of San Diego Resource Recovery Parks

There are many closed landfills and closed rural transfer stations in unincorporated areas of the County and some incorporated cities. These sites could be considered for resource recovery of organics, CDI and/or other source separated materials. Resource recovery activities may include, but would not be limited to chipping and grinding, C&D processing, composting, and other recycling or reuse activities.

3.4 Organic Processing Facilities

Organic materials comprised approximately 39% of the total waste stream disposed in Miramar Landfill in 2012-2013 (*City of San Diego Waste Characterization Study 2013-2013*). As identified in Senate Bill 1383, Short-Lived Climate Pollutants: Organic Waste Methane Emissions Reductions, methane emissions reduction goals shall include a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025.

If the State goals are to be achieved, expansions and/or additional facilities will be needed in the region. Anaerobic digestion (AD) facilities are being proposed. Several AD pilot programs occurred during 2016 - 2018, including a wastewater treatment co-digestion project. The

County of San Diego provides assistance to facilities in order to divert more organic materials from the landfill. Although the amount of organic material disposal by jurisdiction is not currently tracked, franchised haulers report that materials from the unincorporated areas are processed at these facilities. These facilities are listed in **Table** and

Table 5 in alphabetical order.

3.5 Construction and Demolition Recovery Facilities

Construction and Demolition (C&D) debris makes up approximately 25% of disposed materials at the Miramar Landfill (*City of San Diego Waste Characterization Study 2013-2013*). In order to increase recycling of C&D materials, the County Board of Supervisors passed a C&D Recycling Ordinance in April of 2007. This ordinance requires permittees with projects 40,000 square feet and greater to place a performance guarantee that they will recycle 90% of the inert materials and 70% of the remaining debris. In February 2020 the C&D Ordinance was amended with the intent to increase C&D material diversion. For projects with permits issued on or after April 1, 2020, the project threshold was dropped from 40,000 sq. ft or greater to projects greater than 5,000 sq. ft. On January 1, 2021 this threshold drops to 1,000 sq. ft. All non-exempt (based on Cal-Green exemptions) land development projects are required to divert 90% of inerts and achieve an overall recycling rate of 65% for all materials (including inerts). In addition, Major grading projects are required to divert 100% of landscape materials from landfill. C&D recycling facilities in San Diego County divert a substantial volume of building materials from local landfills. This section contains the wide variety of C&D recycling businesses proposed or conducting business in the County of San Diego. There are 17 C&D recovery facilities serving the unincorporated county. These facilities are listed in **Table 6**, **Table 7**, and

y's uction	3210 Oceanside Blvd., Oceanside, CA 92056	Inert processing facility.	Clean concrete, asphalt, fill dirt, sand, and petromat.	N/A	N/A	North County incorporated and unincorporated communities.

4 OTHER FACILITIES

The County of San Diego also promotes recycling facilities by listing them in County recycling guides. Through an educational program, guides and flyers are periodically distributed by the County and franchised haulers. The County's hotline and website (toll free 1-877-R-1-EARTH or www.wastefreesd.org) offer recycling referrals to facilities throughout the region. Large recycling facilities are run by the following companies: Allan Company, California Metals, Cactus Recycling, Fibre Resources Unlimited, Inc., and EDCO Recycling.

Many of the facilities listed in the County's guides are small operations that collect primarily CRV materials, metals, cardboard, and inerts. Several companies operate many small recycling centers throughout the region. These small companies sell the recyclable materials to larger companies, which process and ship the materials to end-users. Facilities are listed in alphabetical order.

- A-1 Alloys
- All Ways Recycling
- American Recycling
- AMS (San Diego cite, NOT Escondido)
- Architectural Salvage
- California Metals and Electronics (Miller Metals)
- Cactus Recycling
- DFS Flooring
- DUCO
- Fibre Resources Unlimited
